DETAILED ACTION

Claim Rejections

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al., U.S. Patent No. 6,709,883, in view of Chen et al., U.S. patent No. 6,522,063.

Regarding claims 1-2 and 4-5, Yang et al. discloses a method for forming a light emitting diode having a transparent substrate comprising:

forming a semiconductor multilayer on a first substrate 26 producing a first multilayer structure (Fig. 1);

forming an amorphous interface layer 14 on a second substrate 10, the second substrate being transparent in nature (lines 46-59, Col. 3), producing a second multilayer structure (Fig. 2);

Art Unit: 2818

bonding the first multilayer structure to the second multilayer structure, producing a third multilayer structure (Fig. 3);

removing the first substrate 26 from the third multilayer structure (Fig. 3).

Yang fails to disclose the amorphous interface layer 14 is conductive. However, Chen et al. discloses the light emitting diode using conductive transparent material layer 116 or 218 as amorphous interface layer. It would have been obvious to one having ordinary skill in the art at the time the invention was made to choose conductive transparent material because the conductive transparent material would increase adhesion, provide good Ohmic contact, low sheet resistance, low contact resistance, and high optical transparency.

The references cited in PTO-892 also disclose the transparent adhesive layer is made of either conductive or epoxy resin.

Regarding claims 3 and 6, Chen et al. discloses the amorphous interface layer is made of the material selected from the group of tin oxide, Indium tin oxide, and transparent adhesive agent.

If Applicants are aware of better art than that which has been cited, they are required to call such to attention of the examiner.

When responding to the office action, Applicants' are advice to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) day from the day of this letter. Failure to respond within the period for response will cause the application to become abandoned (see M.P.E.P 710.02(b)).
